

KEMKO

EXCEEDING EXPECTATIONS

QUALITY

For more than 40 years, KEMKO has been serving customers along the Gulf Coast providing quality, affordable metal buildings. We have designed and erected millions of square feet of pre-engineered structures and want to know how we can assist you with your building needs.

Our specialty is designing, manufacturing and erecting metal buildings. We don't believe in the phrase "one size fits all." At KEMKO, we know each customer's needs are unique, and we treat each one with personal service to ensure an exceptional product from start to finish. We are big enough to handle any job, but small enough to give you the personal attention needed for a quality experience.

Located in Daphne, Alabama, we have teams of engineers, fabricators and construction crews ready to listen to your needs, manufacture a design and erect your metal building in a fraction of the time it takes to construct a traditional wood-frame building.

Our focus is on providing not just metal buildings, but buildings that are attractive, economical, weather tight and comfortable.

At KEMKO, all of our buildings are custom engineered for each customer's intended purpose. We look forward to learning how we can meet your needs with a KEMKO building.

OUR MISSION

KEMKO Inc. is a full-service supplier of pre-engineered metal buildings and components to industrial, institutional, commercial, agricultural and residential contractors and end users. Our mission is to provide our customers with the highest quality products at a fair price, while maintaining excellent customer satisfaction throughout the business process.

WHAT MAKES KEMKO DIFFERENT

We want you to know what sets KEMKO apart from others in the metal building industry. KEMKO offers customers a full range of services and options. Much of the industry is composed of small franchised companies who specialize in either the distribution or erection of pre-engineered designs with pre-fabricated materials delivered from a remote supplier. Issues can arise when construction personnel are not familiar with the specific materials delivered to the site, creating down time and delays in your building's completion.

At KEMKO, we are a single-source company. We design and fabricate your building to your specifications in our 40,000-square foot manufacturing facility. Using our own local manufacturing, as well as our own crews gives us an unsurpassed ability to meet deadlines and resolve any problems that may arise quickly and efficiently with little to no down time. The fact that a single company is responsible for the entire building process from concept to on-site construction is among the main benefits of purchasing a KEMKO metal building.

DESIGN

KEMKO buildings are more than just metal structures. Our buildings have been utilized for everything from barns and commercial business to churches and schools. KEMKO buildings are completely customized to meet your needs, making standard building sizes a thing of the past. Today's computer-assisted design allows us to start fresh without being restricted to a range of building sizes. In fact, we believe a buyer will not get what they want or need by simply picking from a list of pre-priced kits, which is why we don't treat metal buildings as generic commodities.

In addition to the layout or floor design of a project, our engineers have the technical knowledge to design a structure that is safe, functional and meets or exceeds all applicable codes.

At KEMKO, the exterior appearance is just as important as the structure itself. For that reason, a KEMKO building is compatible with conventional building exteriors including any combination of wood, brick, stone, glass and masonry, as well as economical metal wall panels. We want your building to be as attractive as it is functional.

CONSTRUCTION

One of the unique advantages of purchasing a KEMKO metal building is that your designer, manufacturer and builder all come from the same place! So, whether you choose a rigid frame, column and beam or tapered beam structure, your KEMKO construction team will be familiar with it and have the necessary accessories for the job.

And, by the way, our design, fabrication and construction departments talk to one another! When a component appears not to fit or a structure seems to pose a problem, the issue is solved almost immediately without involving the owner, thus avoiding long, sometimes costly, delays.

FABRICATION

As you have read, KEMKO is not just a dealer or design firm, we are a full-service engineering and manufacturing facility.

The availability of a well-equipped fabrication plant combined with a knowledgeable design department practically eliminates potential problems at the construction site. It also allows for maximum customizing while fabrication is in process.

Once designed and fabricated, all KEMKO components are transported to the job site by KEMKO personnel.

MATERIALS

KEMKO metal buildings are constructed using the highest-quality materials available. We maintain an extensive inventory of standard and non-standard components and accessories to fit your project's needs. All have the same exceptional quality. Roof and wall panels in various profiles, gauges and finishes are readily available. In addition, all exterior panels are engineered to resist abrasions, corrosive chemicals and natural erosion. We also offer a complete line of accessories such as fasteners, sealants, doors, windows and insulation to complete any job.

PRIDE

At KEMKO we pride ourselves on providing quality service and products in a timely and cost-effective manner. If you require a building quickly, we work with you to meet your needs and goals. We make sure your investment goes to work in weeks, not months.

Any questions? We hope so, because we'd welcome the opportunity to talk with you and discuss how we can assist you in your building needs.
